

Fig. 2. Immunohistochemical analysis of the distribution of Src kinase (A), phosphotyrosine (B), cadherin (C), α -catenin (D), β -catenin (E), and γ -catenin/plakoglobin (F) in tissues of 5-day control (A, G) or originally aberrant and later repaired (H) frog embryos. Magnification 50 \times (B-F) or 100 \times (A, G, H). The bar 100 μ m (A, G, H) or 200 μ m (B-F). 1 – nerve cord or brain; 2 – notochord; 3 – eye; 4 – otic vesicle; 5 – somite; 6 – pharynx or midgut; 7 – presumptive cornea; 8 – lens vesicle; 9 – retina; 10 – pigmented layer. Otherwise the same as in Fig. 1.
